

# “The Best Out Of 2 Worlds” Continuous Control Solutions with Ball Valves

Ball Valves are famous for *full flow* and *tight shut off*.  
Now they are famous for **Continuous Control** as well!

**Continuous Control** with **Ball Valves** is an innovative solution for process applications requiring both **full flow** and **high control accuracy**.

For Continuous Control solutions, the TOP Control with Ball Valve has an integrated PID-Controller. It allows the entry of internal and external set point values, and in addition permits communication with an analog output signal to an external PLC or industry PC.

The control precision of the system lies around **5 percent**.

Enhanced **Networking** features allow for integration in fieldbus configurations (PROFIBUS, DeviceNET).

**Improve your Total Cost of Ownership** with this innovative, attractive solution.
